

New StructureScan™ Sonar Imaging

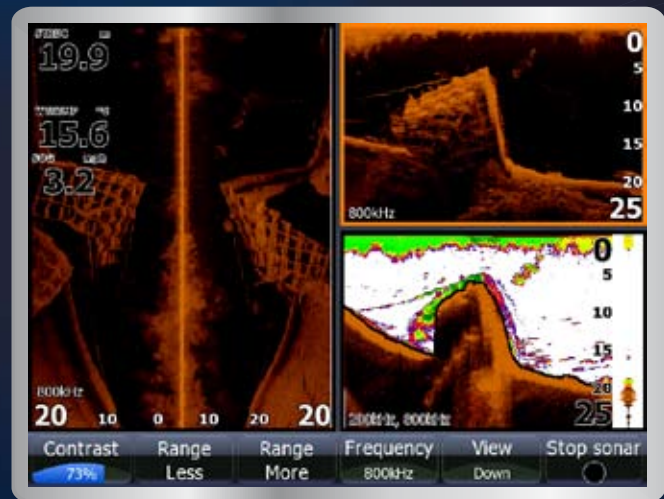

SideScan: Full-screen, top-down panoramic view of highly detailed bottom imaging on either side of the boat.

DownScan™: Adds a new dimension to echosounding. High frequency imaging gives life-like representation of structure including this school bus found submerged in an American lake.

TrackBack™: Scroll back simultaneously through sonar history and chartplotter trail from sonar or StructureScan™ display to easily mark waypoints, and continue to record data while reviewing history.

StructureScan - Get the whole picture: Combine all three technologies Broadband Sounder, SideScan, and DownScan™ into one all powerful angling tool.

New Lowrance StructureScan™

Featuring Exclusive DownScan Imaging™ for HDS

- **Get the whole picture**

Combine 3 technologies – Broadband Sounder, SideScan, and DownScan Imaging™ - into one All-powerful angling tool.

- **Remove all the guess-work**

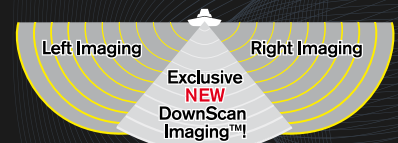

Comparing exclusive new DownScan Imaging™ to BroadBand Sounder technology reveals fish and structure more accurately than either alone.

- **Track-back**

Scroll back simultaneously through sonar history and chartplotter trail from sonar or StructureScan™ display to easily mark waypoints, and continue to record data while reviewing history.

- **Network StructureScan™**

Up to 3 ethernet networks displays or sensors without expansion port, share SideScan and DownScan Imaging™ across all displays on the network.
